#### 1.0 EXECUTIVE SUMMARY

RidgeGate Couplet Apartments is proposed to be located within the eastern portion in between the eastbound (EB) and westbound (WB) travel lanes of RidgeGate Parkway, east of future Rhapsody Road, in Lone Tree, Colorado. The project is proposed to include 349 multifamily dwelling units. It is expected that RidgeGate Couplet Apartments will be completed in the next several years. Therefore, analysis was conducted for the 2025 short-term buildout horizon as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the City of Lone Tree standards and requirements:

- RidgeGate Parkway WB & Rhapsody Road (#1)
- RidgeGate Parkway WB & West Road (#2)
- RidgeGate Parkway WB & East Road (#3)
- RidgeGate Parkway EB & Rhapsody Road (#4)
- RidgeGate Parkway EB & West Road (#5)
- RidgeGate Parkway EB & East Road (#6)

In addition, the proposed full movement West Access (#7) on the West Road and the proposed full movement East Access (#8) on the East Road were evaluated.

Regional access to the project will be provided by Interstate 25 (I-25), RidgeGate Parkway, and Chambers Road. Primary access will be provided by RidgeGate Parkway while direct access will be provided by a proposed full movement West Access (#7) along the proposed private north-south road to the west of the site—identified as West Road within this study—and a proposed full movement East Access (#8) along the proposed north-south road to the east of the site, identified as East Road herein.

RidgeGate Couplet Apartments is expected to generate approximately 1,586 weekday daily trips, with 129 of these trips occurring during the morning peak hour and 136 of these trips occurring during the afternoon peak hour.

Based on the analysis presented in this report, Kimley-Horn believes RidgeGate Couplet Apartments will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following recommendations:

#### **2025 Recommendations**

- Bicycle lanes and sidewalk are anticipated to be provided along each side of Rhapsody Road. Sidewalk is anticipated to be provided traveling north-south along the perimeter of the project site along West Road and East Road, in addition to sidewalk anticipated to be provided along the north and south ends of the project to connect West Road to East Road. Crosswalks are also anticipated to be provided in each direction at the RidgeGate Parkway WB and EB & Rhapsody Road intersections (#1 & #4). Crosswalks are also anticipated to be provided at the West Road and East Road intersections (#2, #3, #5, #6) to cross east-west across East Road and West Road. Sidewalk will also be provided onsite as appropriate to provide safe access to the apartment units from the parking and to and from other amenities anticipated to be provided by the apartment complex to residents.
- Rhapsody Road is proposed to be constructed as part of the RidgeGate King Soopers development with one through lane in each direction with on-street bicycle lanes and on-street parallel parking along both sides of the roadway. The RidgeGate Parkway WB & Rhapsody Road (#1) and the RidgeGate Parkway EB & Rhapsody Road (#4) intersections are anticipated to be signalized 'T'-intersections operating with full turning movements as appropriate on the one-way couplet. At these T-intersections, R3-1 No Right Turn signs should be installed at the approaches to RidgeGate Parkway and R6-1 "ONE WAY" signs should be posted along RidgeGate Parkway as appropriate to prevent vehicles from turning right and entering oncoming traffic. The RidgeGate Parkway WB & Rhapsody Road (#1) intersection should provide a westbound left turn lane with 190 feet in length and a 110-foot taper. A northbound left turn lane should also be provided with 120 feet in length and a 50-foot taper. The RidgeGate Parkway EB & Rhapsody Road (#4) intersection should provide an eastbound left turn lane 101 feet in length with a 75-foot taper. This intersection should also provide a

southbound left turn lane with 120 feet in length and a 50-foot taper. Any improvements to the Rhapsody Road intersections (#1 and #4) should be provided in construction of the RidgeGate King Soopers development. Of note, as Rhapsody Road is anticipated to provide north and south legs on either side of RidgeGate Parkway before 2045, it is recommended that sufficient pavement width be provided, and chevron striping be placed where the future southbound through and northbound through lanes will be placed.

- RidgeGate Parkway is anticipated to use the existing available pavement width to restripe the
  roadway to provide three through lanes in each direction within the study area during this
  horizon. It is recommended that the existing striped-out inside lane along RidgeGate Parkway
  in both directions be striped as the third through lane.
- Along RidgeGate Parkway WB, westbound left turn lanes should be provided at the West Road (#2) and East Road (#3) intersections. At the West Road (#2) intersection, a westbound left turn lane 190 feet in length with a 120-foot taper should be provided. The East Road (#3) intersection should also provide a westbound left turn lane 190 feet in length with a 120-foot taper. The northbound approach to each of these intersections are anticipated to be for northbound left turning movements and should be stop-controlled with R1-1 "STOP" signs placed at each northbound approach to these intersections. R3-1 No Right Turn signs should be placed underneath the "STOP" signs while R6-1 "ONE WAY" signs should be placed along RidgeGate Parkway WB as appropriate to prevent vehicles from turning right and entering oncoming traffic.
- Along RidgeGate Parkway EB, eastbound left turn lanes should be provided at the West Road (#5) and East Road (#6) intersections. Due to intersection spacing, the East Road (#5) intersection should provide an eastbound left turn lane 175 feet in length with a 75-foot taper. At the East Road (#6) intersection, an eastbound left turn lane with 190 feet in length and a 75-foot taper should be provided. The southbound approach to each of these intersections are anticipated to be for southbound left turning movements and should be stop-controlled with R1-1 "STOP" signs placed at each southbound approach to these intersections. R3-1 No Right Turn signs should be placed underneath the "STOP" signs while R6-1 "ONE WAY" signs should be placed along RidgeGate Parkway EB as appropriate to prevent vehicles from turning right and entering oncoming traffic.
- The East Road and West Road are both anticipated to operate well with one through lane in each direction with turning movements occurring from within the proposed through lanes.

 Two full movement accesses are proposed to be constructed with this project, with the West Access (#7) located along the West Road and the East Access (#8) located along the East Road. Each approach exiting the development should operate well with a shared left/right turn lane and should be stop-controlled with an R1-1 "STOP" sign.

#### **2045 Recommendations**

- The north and south legs of Rhapsody Road on either side of RidgeGate Parkway are anticipated to be constructed before the 2045 long-term horizon. When these legs are constructed, the two Rhapsody Road intersections (#1 and #4) will become four-leg signalized intersections. When this construction occurs, a westbound right turn lane 190 feet in length with a 120-foot taper should be provided at the RidgeGate Parkway WB & Rhapsody Road (#1) intersection while an eastbound right turn lane 190 feet in length with a 120-foot taper should be provided at the RidgeGate Parkway EB & Rhapsody Road (#4) intersection.
- The north and south legs of East Road on either side of RidgeGate Parkway are anticipated to be constructed before the 2045 long-term horizon. When these legs are constructed, the two East Road intersections (#3 and #6) will become four-leg signalized intersections. When this construction occurs, a westbound right turn lane 190 feet in length with a 120-foot taper should be provided at the RidgeGate Parkway WB & East Road (#3) intersection while the RidgeGate Parkway EB & East Road (#6) intersection is anticipated to operate well with eastbound right turning movements occurring from within the third eastbound through lane. The northbound and southbound approaches to each of these intersections along East Road are anticipated to operate well through the 2045 horizon with a shared lane for left/through or through/right turn lanes where appropriate.
- When the parcel to the west of the project site is developed, access along West Road should align with the West Access (#7) proposed in this project if an access to that development is anticipated along West Road. In like manner, when the parcel to the east of the project site is developed, access along East Road should align with the East Access (#8) constructed in this project if an access to that development is anticipated along East Road.

#### **General Recommendations**

 Any onsite or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Lone Tree and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

#### 2.0 INTRODUCTION

Kimley-Horn and Associates, Inc. has prepared this report to document the results of a Traffic Impact Study for RidgeGate Couplet Apartments proposed to be located within the eastern portion in between the eastbound (EB) and westbound (WB) travel lanes of RidgeGate Parkway, east of future Rhapsody Road, in Lone Tree, Colorado. A vicinity map illustrating the RidgeGate Couplet Apartments development location is shown in **Figure 1**. RidgeGate Couplet Apartments is proposed to include 349 multifamily dwelling units. A conceptual site plan is attached in **Appendix G**. It is expected that RidgeGate Couplet Apartments will be completed in the next several years; therefore, analysis was conducted for the 2025 short-term buildout horizon as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the City of Lone Tree standards and requirements:

- RidgeGate Parkway WB & Rhapsody Road (#1)
- RidgeGate Parkway WB & West Road (#2)
- RidgeGate Parkway WB & East Road (#3)
- RidgeGate Parkway EB & Rhapsody Road (#4)
- RidgeGate Parkway EB & West Road (#5)
- RidgeGate Parkway EB & East Road (#6)

In addition, the proposed full movement West Access (#7) on the West Road and the proposed full movement East Access (#8) on the East Road were evaluated.

Regional access to the project will be provided by Interstate 25 (I-25), RidgeGate Parkway, and Chambers Road. Primary access will be provided by RidgeGate Parkway while direct access will be provided by a proposed full movement West Access (#7) along the proposed private north-south road to the west of the site—identified as West Road within this study—and a proposed full movement East Access (#8) along the proposed north-south road to the east of the site, identified as East Road herein.

FIGURE 1
RIDGEGATE COUPLET APARTMENTS
LONE TREE, COLORADO
VICINITY MAP

#### 3.0 EXISTING AND FUTURE CONDITIONS

#### 3.1 Existing Study Area

The existing site is comprised of vacant land. The site is bounded to the north and south by the westbound and eastbound travel lanes of RidgeGate Parkway, respectively. Otherwise, surrounding the site is primarily vacant land. The City of Lone Tree Zoning Map refers to the area surrounding the site as "Planned Development District", specifically the "RidgeGate Planned Development."

#### 3.2 Existing and Future Roadway Network

RidgeGate Parkway extends east-west with two through lanes in each direction within the study area, although each direction is planned to use the existing pavement width to provide three through lanes in the study area in the next few years. In the study area, RidgeGate Parkway separates the eastbound and westbound travel lanes by as much as approximately 750 feet in some areas. The RidgeGate Couplet Apartments project is proposed to be located within the eastern portion of this one-way couplet separation between the two directions of travel on RidgeGate Parkway. The posted speed limit is 45 miles per hour.

Rhapsody Road is a proposed future roadway approximately 300 feet to the west of the project area. It is anticipated this roadway will provide on-street bicycle lanes and on-street parallel parking along both sides of the roadway. This roadway will travel in the north-south direction between the two directions of travel of RidgeGate Parkway and is anticipated to provide one through lane in each direction with construction of the RidgeGate King Soopers project. As development continues to occur, this roadway is anticipated to provide north and south legs on either side of RidgeGate Parkway. Rhapsody Road is identified in the City of Lone Tree 2040 Transportation Plan as "Collector A" and according to the Transportation Plan it is anticipated to primarily provide one through lane in each direction. In the future, Rhapsody Road is anticipated to connect to Lincoln Avenue to the north and "Collector D" to the south.

"West Road" is proposed to be constructed as a private road along the west side of the project site with project construction between the two directions of travel along RidgeGate Parkway with one through lane in each direction. "East Road" is proposed to be constructed along the east side of the project site with project construction between the two directions of travel along RidgeGate

Parkway with one through lane in each direction. As development progresses in the area, a north leg of East Road is anticipated to be constructed before the 2045 horizon that is anticipated to primarily serve residential uses, while a south leg to the south of RidgeGate Parkway is anticipated to be constructed as direct access into a medical/hospital land use. The existing intersection lane configuration within the study area is shown in **Figure 2**.

#### 3.3 Existing Traffic Volumes

To provide a basis of eastbound and westbound through movement counts adjacent to the project site, existing turning movement counts were conducted at the intersection of RidgeGate Parkway and Peoria Street on Thursday, July 7, 2022, during the weekday morning and afternoon peak hours. The counts were conducted during the morning and afternoon peak hours of adjacent street traffic in 15-minute intervals from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM on this count date. The existing intersection traffic volumes are shown in **Figure 3** with count sheets provided in **Appendix A**.

XXX(XXX)

Weekday AM(PM) Peak Hour Traffic Volumes

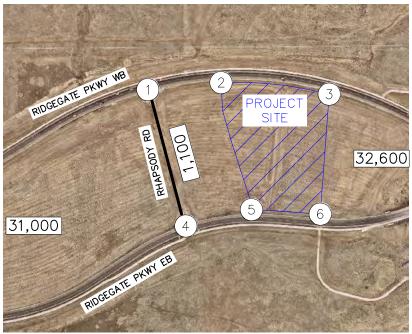

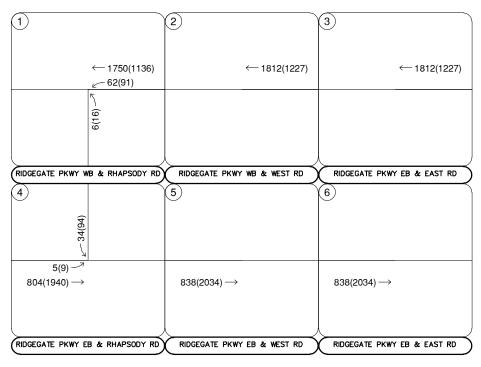

#### 3.4 Unspecified Development Traffic Growth

According to traffic projections from the Denver Regional Council of Governments (DRCOG) traffic model, the area surrounding the site is expected to have an average 30-year growth factor of 1.87 based on a 2020 volume of 23,000 vehicles per day (vpd) and future 2050 projection of 43,000 vpd. This growth factor equates to an annual growth rate of 2.11 percent. Future traffic volume projections and growth rate calculations are provided in **Appendix B**. This annual growth rate was used to estimate short-term 2025 and long-term 2045 traffic volume projections in the RidgeGate King Soopers Traffic Impact Study completed by Kimley-Horn in March 2023. As the RidgeGate King Soopers is assumed to be completed prior to construction of this project, the background plus project traffic volumes from the RidgeGate King Soopers development were conservatively used as the background traffic volumes for this project. Of note, the RidgeGate King Soopers development included the traffic generated by the Southwest Village Traffic Impact Study completed by JR Engineering. The RidgeGate King Soopers study also included the traffic assumed to be induced by the future construction of the north and south legs of Rhapsody Road as well as High Note Avenue, which is a future proposed north-south roadway approximately 1,200 feet to the west of Rhapsody Road.

Within the one-way couplet, it is known that the approximately 200,000 square-foot property to the west of this project—between the proposed Rhapsody Road and the private West Road referenced in this project—is anticipated to be developed as general retail uses before the 2045 horizon. As such, the traffic anticipated to be generated by that retail development was included in the 2045 background volumes of this traffic study. Additionally, it is known that the approximately 178,000 square-foot property to the east of this project—east of the East Road referenced in this study—is anticipated to be developed as affordable multi-family housing before the 2045 horizon; the traffic generated by this development was also included in the 2045 background volumes of this traffic study. Finally, the anticipated land uses to the north of the project site as well as the medical/hospital land use to the south of the project site were also added into the background traffic volumes in the 2045 horizon. The assumed trip distribution and traffic assignment for the retail, affordable housing, and medical/hospital developments are included in Appendix B in Figures B1 through B6. Of note, the medical/dental office building trip generation land use was conservatively assumed for the medical/hospital parcel, as this is a higher trip generator than a hospital. The calculated background traffic volumes for 2025 and 2045 are shown in **Figure 4** and **Figure 5**, respectively.

#### 4.0 PROJECT TRAFFIC CHARACTERISTICS

#### 4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*<sup>1</sup> published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report average rate equations that apply to Multifamily Mid-Rise Housing (ITE Land Use Code 221) for traffic associated with the development.

RidgeGate Couplet Apartments is expected to generate approximately 1,586 weekday daily trips, with 129 of these trips occurring during the morning peak hour and 136 of these trips occurring during the afternoon peak hour. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual*, 11<sup>th</sup> Edition – Volume 1: User's Guide and Handbook, 2021. **Table 1** summarizes the estimated trip generation for the RidgeGate Couplet Apartments. The trip generation worksheets for RidgeGate Couplet Apartments as well as the adjacent proposed future retail and affordable housing developments are included in **Appendix C**.

Table 1 – RidgeGate Couplet Apartments Traffic Generation

	Weekday Vehicle Trips							
Land Use and Size	Daily	AM Peak Hour			PM Peak Hour			
	Daily	ln	Out	Total	In	Out	Total	
Multifamily Mid-Rise Housing (ITE 221) – 349 Dwelling Units	1,586	30	99	129	83	53	136	

\_

<sup>&</sup>lt;sup>1</sup> Institute of Transportation Engineers, *Trip Generation Manual*, Eleventh Edition, Washington DC, 2021.

#### **4.2 Trip Distribution**

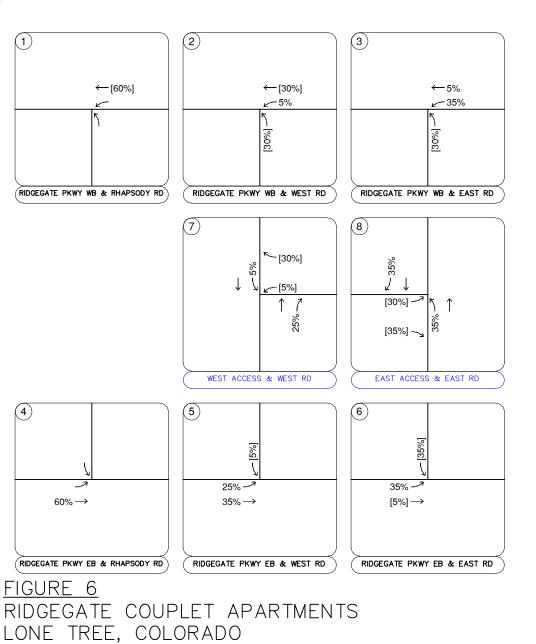

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding demographic information, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. Following construction of this development but prior to 2045, it is anticipated that the area surrounding the project site will be developed with additional roadway connections in place. As such, unique trip distributions were used for the 2025 and 2045 horizon years to account for this change. **Figure 6** shows the 2025 project trip distribution while **Figure 7** shows the 2045 trip distribution.

#### **4.3 Traffic Assignment**

RidgeGate Couplet Apartments traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the development shown in **Table 1**. Project traffic assignment for the 2025 horizon is shown in **Figure 8** while the traffic assignment in the 2045 horizon is shown in **Figure 9**.

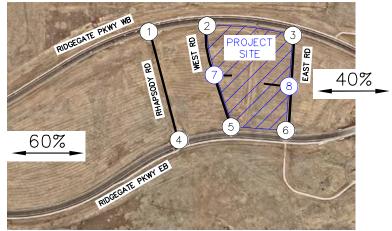

#### 4.4 Total (Background Plus Project) Traffic

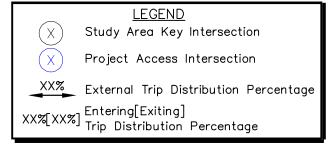

Site traffic volumes were added to the background volumes to represent estimated traffic conditions for the short-term 2025 buildout horizon and long-term 2045 twenty-year planning horizon. These total traffic volumes for the study area are illustrated for the 2025 and 2045 horizon years in **Figures 10** and **11**, respectively.

#### **5.0 TRAFFIC OPERATIONS ANALYSIS**

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2025 and 2045 development horizons at the identified key intersections. The acknowledged source used in this study for determining overall capacity is the 6<sup>th</sup> Edition of the *Highway Capacity Manual (HCM)*<sup>2</sup>.

#### **5.1 Analysis Methodology**

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). For intersections and roadways in this study area, standard traffic engineering practice recommends overall intersection LOS D and movement/approach LOS E as the minimum desirable thresholds for acceptable operations. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

Table 2 - Level of Service Definitions

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
Α	≤ 10	≤ 10
В	> 10 and ≤ 20	> 10 and ≤ 15
С	> 20 and ≤ 35	> 15 and ≤ 25
D	> 35 and ≤ 55	> 25 and ≤ 35
E	> 55 and ≤ 80	> 35 and ≤ 50
F	> 80	> 50

Definitions provided from the Highway Capacity Manual, Sixth Edition, Transportation Research Board, 2016.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the LOS for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for signalized, roundabout, and all-way stop controlled intersections are defined for each approach and for the overall intersection.

\_

<sup>&</sup>lt;sup>2</sup> Transportation Research Board, *Highway Capacity Manual*, Sixth Edition, Washington DC, 2016.

#### **5.2 Key Intersection Operational Analysis**

Calculations for the operational level of service at the key intersections for the study area are provided in **Appendix D**. Existing peak hour factors were utilized in the 2025 and 2045 horizon analysis years. Synchro traffic analysis software was used to analyze the signalized and unsignalized key intersections for HCM level of service.

#### RidgeGate Parkway WB & Rhapsody Road (#1)

The intersection of RidgeGate Parkway WB & Rhapsody Road (#1) is a proposed future signalized intersection to the west of the project site. This intersection does not exist today but for purposes of this study it is assumed to be constructed as a 'T'-intersection in the 2025 horizon as part of the RidgeGate King Soopers project, with the north leg of the intersection to be constructed by others as development occurs to the north of RidgeGate Parkway prior to the 2045 horizon. In the 2025 horizon, this intersection is anticipated to be signalized to provide safer travel for pedestrians and bicyclists. A westbound left turn lane is anticipated to be provided as well as a northbound left turn lane during the 2025 horizon. As recommended in the RidgeGate King Soopers study, an R3-1 No Right Turn sign should be installed on the northbound approach to the intersection and R6-1 "ONE WAY" signs should be posted along RidgeGate Parkway as appropriate to prevent vehicles from turning right and entering oncoming traffic. A northbound through lane will eventually be necessary as the north leg of Rhapsody Road is constructed. As such, it is recommended that sufficient pavement width be provided, and chevron striping be placed where the future northbound through lane will be placed. With project traffic, this intersection is anticipated to operate at an acceptable level of service during both the 2025 and 2045 horizon years based on the addition of project traffic and this operational level of service analysis. **Table 3** provides the results of the LOS analysis conducted at this intersection.

Table 3 – RidgeGate Parkway WB & Rhapsody Road (#1) LOS Results

	AM Peal	( Hour	PM Peak Hour		
Scenario	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	
2025 Background #	7.1	Α	7.2	Α	
2025 Background Plus Project #	7.3	Α	7.3	Α	
2045 Background ##	16.2	В	16.2	В	
2045 Background Plus Project ##	16.5	В	16.4	В	

# = Signalized 'T'-intersection; ## = Signalized 4-leg intersection

#### RidgeGate Parkway WB & West Road (#2)

The intersection of RidgeGate Parkway WB & West Road (#2) is proposed to be constructed along the west side of the project site as an unsignalized 'T'-intersection with development of this project with stop control on the northbound West Road approach to the intersection. West Road is anticipated to be a private road with one through lane in each direction between the two travel directions of RidgeGate Parkway. A westbound left turn lane is recommended to be provided at this intersection with project construction. The northbound approach to this intersection will be for northbound left turning movements only and should provide an R1-1 "STOP" sign with an R3-1 No Right Turn sign posted underneath the "STOP" sign and an R6-1 "ONE WAY" sign posted along RidgeGate Parkway directly to the north of the northbound West Road approach to prevent vehicles from turning right into oncoming traffic. With project traffic, this intersection is anticipated to operate at an acceptable level of service during both the 2025 and 2045 horizon years based on the addition of project traffic and this operational level of service analysis. **Table 4** provides the results of the LOS analysis conducted at this intersection.

Table 4 – RidgeGate Parkway WB & West Road (#2) LOS Results

	AM Peal	k Hour	PM Peak Hour		
Scenario	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS	
2025 Background Plus Project					
Northbound Left	14.8	В	12.1	В	
2045 Background					
Northbound Left	20.3	С	16.1	С	
2045 Background Plus Project					
Northbound Left	24.2	С	17.3	С	

#### RidgeGate Parkway WB & East Road (#3)

The intersection of RidgeGate Parkway WB & East Road (#3) is proposed to be constructed along the east side of the project site as an unsignalized 'T'-intersection with development of this project with stop control on the northbound East Road approach to the intersection in the 2025 horizon. East Road is anticipated to provide one through lane in each direction between the two travel directions of RidgeGate Parkway. A westbound left turn lane is recommended to be provided at this intersection with project construction. During the 2025 horizon, the northbound approach to this intersection will be for northbound left turning movements only and should provide an R1-1 "STOP" sign with an R3-1 No Right Turn sign posted underneath the "STOP" sign and an R6-1 "ONE WAY" sign posted along RidgeGate Parkway directly to the north of the northbound East Road approach to prevent vehicles from turning right into oncoming traffic.

By the 2045 horizon, it is anticipated that there will be a north leg constructed at this intersection to access additional planned development to the north of RidgeGate Parkway. When this development to the north of RidgeGate Parkway occurs, this intersection is anticipated to require signalization to continue operating at an acceptable level of service. A signal warrant analysis was conducted at this intersection in the 2025 background plus project and 2045 background horizons. A signal is not anticipated to be warranted or needed at this intersection solely with project traffic in the 2025 or 2045 horizons; the signal is anticipated to needed because of the development to the north of this project and construction of this north leg. The signal warrant analysis worksheets are provided in **Appendix E**. The intersection is recommended to provide a westbound right turn lane when development to the north of the project occurs, while the northbound approach should operate well through the 2045 horizon with a shared left/through lane and the southbound approach is anticipated to operate well with one lane for shared through/right turning movements.

With project traffic, this intersection is anticipated to operate at an acceptable level of service during both the 2025 and 2045 horizon years based on the addition of project traffic and this operational level of service analysis. **Table 5** provides the results of the LOS analysis conducted at this intersection.

Table 5 – RidgeGate Parkway WB & East Road (#3) LOS Results

#### RidgeGate Parkway EB & Rhapsody Road (#4)

The intersection of RidgeGate Parkway EB & Rhapsody Road (#4) is a proposed future signalized intersection to the west of the project site. This intersection does not exist today but for purposes of this study it is assumed to be constructed as a 'T'-intersection in the 2025 horizon as part of the RidgeGate King Soopers project, with the south leg of the intersection to be constructed by others as development occurs to the south of RidgeGate Parkway prior to the 2045 horizon. In the 2025 horizon, this intersection is anticipated to be signalized to provide safer travel for pedestrians and bicyclists while also providing sufficient gaps for southbound left turning vehicles to turn onto RidgeGate Parkway EB. An eastbound left turn lane is anticipated to be provided as well as a southbound left turn lane during the 2025 horizon. As recommended in the RidgeGate King Soopers study, an R3-1 No Right Turn sign should be installed on the southbound approach to the intersection and R6-1 "ONE WAY" signs should be posted along RidgeGate Parkway as appropriate to prevent vehicles from turning right and entering oncoming traffic.

A southbound through lane will eventually be necessary as the south leg of Rhapsody Road is constructed. As such, it is recommended that sufficient pavement width be provided, and chevron striping be placed where the future southbound through lane will be placed. With project traffic, this intersection is anticipated to operate at an acceptable level of service during both the 2025 and 2045 horizon years based on the addition of project traffic and this operational level of service analysis. **Table 6** provides the results of the LOS analysis conducted at this intersection.

Table 6 - RidgeGate Parkway EB & Rhapsody Road (#4) LOS Results

2045 Background Plus Project ##	13.3	В	18.6	В	

# = Signalized 'T'-intersection; ## = Signalized 4-leg intersection

#### RidgeGate Parkway EB & West Road (#5)

The intersection of RidgeGate Parkway EB & West Road (#5) is proposed to be constructed along the west side of the project site as an unsignalized 'T'-intersection with development of this project with stop control on the southbound West Road approach to the intersection. West Road is anticipated to be a private road with one through lane in each direction between the two travel directions of RidgeGate Parkway. An eastbound left turn lane is recommended to be provided at this intersection with project construction. The southbound approach to this intersection will be for southbound left turning movements only and should provide an R1-1 "STOP" sign with an R3-1 No Right Turn sign posted underneath the "STOP" sign and an R6-1 "ONE WAY" sign posted along RidgeGate Parkway directly to the south of the southbound West Road approach to prevent vehicles from turning right into oncoming traffic. With project traffic, this intersection is anticipated to operate at an acceptable level of service during both the 2025 and 2045 horizon years based on the addition of project traffic and this operational level of service analysis. **Table 7** provides the results of the LOS analysis conducted at this intersection.

Table 7 – RidgeGate Parkway EB & West Road (#5) LOS Results

	AM Peal	k Hour	PM Peak Hour

2045 Background					
Southbound Left	10.8	В	20.3	С	
2045 Background Plus Project					
Southbound Left	12.6	В	26.6	D	

#### RidgeGate Parkway EB & East Road (#6)

The intersection of RidgeGate Parkway EB & East Road (#6) is proposed to be constructed along the east side of the project site as an unsignalized 'T'-intersection with development of this project with stop control on the southbound East Road approach to the intersection during the 2025 horizon. East Road is anticipated to provide one through lane in each direction between the two travel directions of RidgeGate Parkway. An eastbound left turn lane is recommended to be provided at this intersection with project construction. The southbound approach to this intersection will be for southbound left turning movements only during the 2025 horizon and should provide an R1-1 "STOP" sign with an R6-1 No Right Turn sign posted underneath the "STOP" sign and an R6-1 "ONE WAY" sign posted along RidgeGate Parkway directly to the south of the southbound East Road approach to prevent vehicles from turning right into oncoming traffic.

By the 2045 horizon, it is anticipated that there will be a south leg constructed at this intersection to access a planned medical/hospital land use to the south of RidgeGate Parkway. When this development to the north of RidgeGate Parkway occurs, this intersection is anticipated to require signalization to continue operating at an acceptable level of service. A signal warrant analysis was conducted at this intersection in the 2025 background plus project and 2045 background horizons. A signal is not anticipated to be warranted or needed at this intersection solely with project traffic in the 2025 or 2045 horizons; the signal is anticipated to needed because of the development to the north and south of this project and the traffic from those developments that would use this roadway in between the one-way couplet of RidgeGate Parkway. The signal warrant analysis worksheets are provided in **Appendix E**. The northbound approach should operate well through the 2045 horizon with a shared through/right turn lane and the southbound approach is anticipated to operate well with one lane for shared left/through turning movements.

With project traffic, this intersection is anticipated to operate at an acceptable level of service during both the 2025 and 2045 horizon years based on the addition of project traffic and this operational level of service analysis. **Table 8** provides the results of the LOS analysis conducted at this intersection.

Table 8 – RidgeGate Parkway EB & East Road (#6) LOS Results

# = Unsignalized 'T'-intersection ## = Signalized 4-leg intersection; NB: shared through/right turn lane; SB: shared left/through lane

#### **Project Accesses**

With completion of the RidgeGate Couplet Apartments project, two full movement accesses are proposed to the development. The West Access (#7) is proposed to be located along the West Road while the East Access (#8) is proposed to be located along the East Road. The westbound approach exiting the West Access (#7) and the eastbound approach exiting the East Access (#8) should each provide an R1-1 "STOP" sign for vehicles exiting the project site. The northbound approach to each access is anticipated to operate well through the 2045 horizon with a shared left/through lane along each roadway while the southbound approach to each access is also anticipated to operate well through the 2045 horizon with a shared left/through lane. Of note, it is assumed for purposes of this analysis that as the anticipated retail space to the west of West Road develops that an eastern access to that site will be constructed which should align with the West Access (#7). Additionally, it is assumed in this study that as the proposed affordable housing develops to the east of East Road that an access to that site will be constructed which should align with the East Access (#8).

**Table 9** provides the results of the level of service for these accesses. As shown in the table, both accesses are anticipated to have all movements operating at LOS A during the peak hours in both the buildout year 2025 and the 2045 long-term horizons.

#### **5.3 Vehicle Queuing Analysis**

A vehicle queuing analysis was conducted for the study area intersections. The queuing analysis was performed using Synchro presenting the results of the 95<sup>th</sup> percentile queue lengths. Results are shown in the following **Table 10** with calculations provided within the level of service operational sheets of **Appendix D** for unsignalized intersections and **Appendix F** for signalized intersections.

Table 10 - Turn Lane Queuing Analysis Results

DNE = Does Not Exist; T = Taper Length; C = Continuous; S = Shared Taper;

Blue Text = Recommendation

All queues are anticipated to remain within the recommended turn lane lengths through 2045. The storage and taper lengths along RidgeGate Parkway provided in **Table 10** are based on a standard turn lane length of 190 feet with a 120-foot taper. Where these turn lane and taper lengths are not feasible, the recommended turn lane length provided is the maximum feasible length based on site constraints, with the minimum recommended turn lane length set as 100 feet and the minimum taper length set as 75 feet. Of note, it is not advisable to provide a continuous deceleration/acceleration lane along either direction of RidgeGate Parkway as this would be likely to cause unsafe weaving maneuvers for vehicles entering and exiting the development. For this reason, separate left turn lanes have been recommended at each study area intersection on RidgeGate Parkway. The turn lanes along Rhapsody Road were assigned a minimum storage length of 100 feet, with additional storage length provided where advisable to accommodate

expected queues. The turn lane exhibit used for the provided turn lane and taper lengths is provided in **Appendix G**.

In 2025, the intersection of RidgeGate Parkway WB & Rhapsody Road (#1) is recommended to provide a westbound left turn lane with a storage length of 190 feet with a 110-foot taper. A northbound left turn lane should be provided at this intersection 120 feet in length with a 50-foot taper.

At the RidgeGate Parkway WB & West Road (#2) intersection, a westbound left turn lane should be provided with 190 feet in length and a 120-foot taper. The RidgeGate Parkway WB & East Road (#3) intersection should provide a westbound left turn lane 190 feet in length with a 120-foot taper.

In 2025, the intersection of RidgeGate Parkway EB & Rhapsody Road (#4) is recommended to provide an eastbound left turn lane with 101 feet in length and a 75-foot taper. A southbound left turn should also be provided at this intersection with 120 feet in length and a 50-foot shared taper; the taper length will be shared with the northbound left turn lane into the RidgeGate King Soopers development.

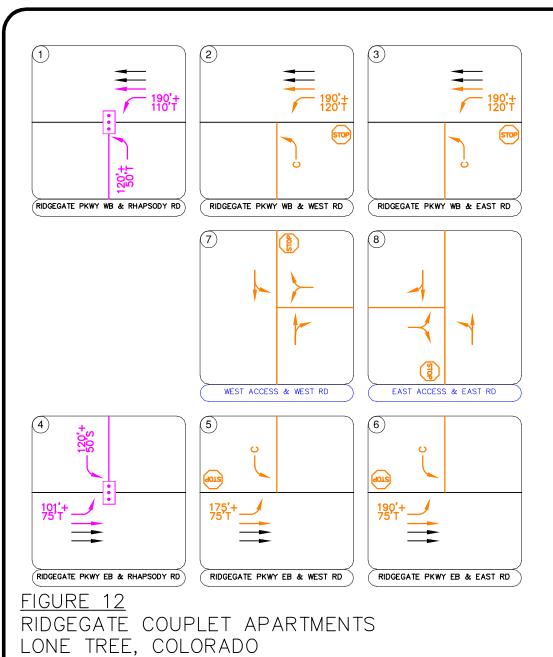

At the RidgeGate Parkway EB & West Road (#5) intersection, an eastbound left turn lane should be provided with 175 feet in length and a 75-foot taper. The RidgeGate Parkway EB & East Road (#6) intersection should provide an eastbound left turn lane 190 feet in length with a 75-foot taper. With the projected use of Rhapsody Road as a local collector by 2045, it is recommended that a westbound right turn lane be provided at the RidgeGate Parkway WB & Rhapsody Road (#1) intersection when the north leg of this intersection is constructed. This turn lane should provide 190 feet in length with a 120-foot taper. In like manner, an eastbound right turn lane should be provided with 190 feet in length and a 120-foot taper when the south leg of the RidgeGate Parkway EB & Rhapsody Road (#4) intersection is constructed. It is also recommended when development to the north of RidgeGate Parkway WB occurs that a westbound right turn lane be provided at the RidgeGate Parkway WB & East Road (#3) intersection be provided with 190 feet in length and a 120-foot taper.

## **5.4 Pedestrian and Bicycle Evaluation**

To address components of a multimodal traffic study, pedestrian and bicycle infrastructure evaluations were conducted. Sidewalk exists along both the eastbound and westbound RidgeGate Parkway couplets within the study area, with the sidewalk south of the eastbound direction able to be utilized as cycle track as it provides approximately a 12-foot width. Bicycle lanes and sidewalk are also anticipated to be provided along each side of Rhapsody Road. Sidewalk is anticipated to be provided traveling north-south along the perimeter of the project site along West Road and East Road, in addition to sidewalk anticipated to be provided along the north and south ends of the project to connect West Road to East Road. Crosswalks are also anticipated to be provided in each direction at the RidgeGate Parkway WB and EB & Rhapsody Road intersections (#1 & #4). Crosswalks are also anticipated to be provided at the West Road and East Road intersections (#2, #3, #5, #6) to cross east-west across East Road and West Road. Sidewalk will also be provided onsite as appropriate to provide safe access to the apartment units from the parking lot as well to and from the amenities anticipated to be provided by the apartment complex to residents. As the surrounding area continues to develop as part of the overall RidgeGate East Planned Development, these pedestrian and bicycle facilities will serve the larger community and provide safer access to the development.

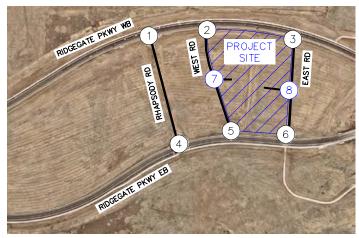

#### **5.5 Improvement Summary**

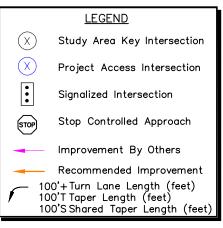

Based on the results of the intersection operational and vehicle queuing analysis, the key intersection recommended improvements and control are shown in **Figure 12** for the 2025 horizon and in **Figure 13** for the 2045 long-term planning horizon.

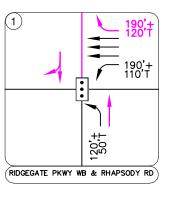

2025 RECOMMENDED GEOMETRY AND CONTROL

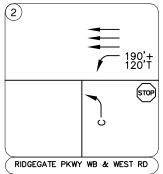

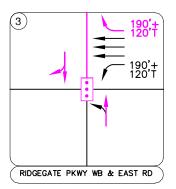

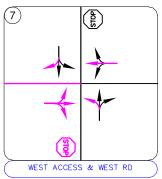

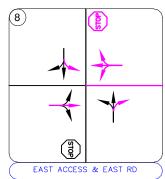

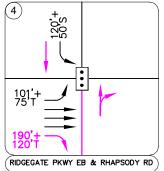

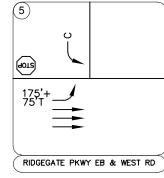

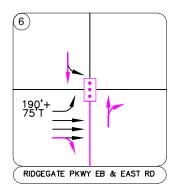

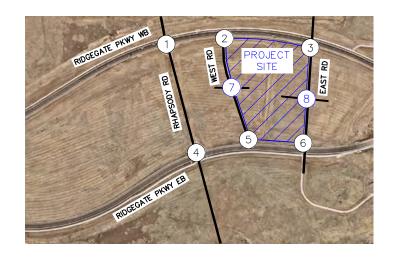

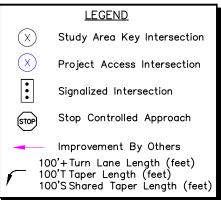

FIGURE 13
RIDGEGATE COUPLET APARTMENTS
LONE TREE, COLORADO
2045 RECOMMENDED GEOMETRY AND CONTROL

### **6.0 CONCLUSIONS AND RECOMMENDATIONS**

Based on the analysis presented in this report, Kimley-Horn believes RidgeGate Couplet Apartments will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following recommendations:

## **2025 Recommendations**

- Bicycle lanes and sidewalk are anticipated to be provided along each side of Rhapsody Road. Sidewalk is anticipated to be provided traveling north-south along the perimeter of the project site along West Road and East Road, in addition to sidewalk anticipated to be provided along the north and south ends of the project to connect West Road to East Road. Crosswalks are also anticipated to be provided in each direction at the RidgeGate Parkway WB and EB & Rhapsody Road intersections (#1 & #4). Crosswalks are also anticipated to be provided at the West Road and East Road intersections (#2, #3, #5, #6) to cross east-west across East Road and West Road. Sidewalk will also be provided onsite as appropriate to provide safe access to the apartment units from the parking and to and from other amenities anticipated to be provided by the apartment complex to residents.
- Rhapsody Road is proposed to be constructed as part of the RidgeGate King Soopers development with one through lane in each direction with on-street bicycle lanes and on-street parallel parking along both sides of the roadway. The RidgeGate Parkway WB & Rhapsody Road (#1) and the RidgeGate Parkway EB & Rhapsody Road (#4) intersections are anticipated to be signalized 'T'-intersections operating with full turning movements as appropriate on the one-way couplet. At these T-intersections, R3-1 No Right Turn signs should be installed at the approaches to RidgeGate Parkway and R6-1 "ONE WAY" signs should be posted along RidgeGate Parkway as appropriate to prevent vehicles from turning right and entering oncoming traffic. The RidgeGate Parkway WB & Rhapsody Road (#1) intersection should provide a westbound left turn lane with 190 feet in length and a 110-foot taper. A northbound left turn lane should also be provided with 120 feet in length and a 50-foot taper. The RidgeGate Parkway EB & Rhapsody Road (#4) intersection should provide an eastbound left turn lane 101 feet in length with a 75-foot taper. This intersection should also provide a southbound left turn lane with 120 feet in length and a 50-foot taper. Any improvements to the Rhapsody Road intersections (#1 and #4) should be provided in construction of the RidgeGate

King Soopers development. Of note, as Rhapsody Road is anticipated to provide north and south legs on either side of RidgeGate Parkway before 2045, it is recommended that sufficient pavement width be provided, and chevron striping be placed where the future southbound through and northbound through lanes will be placed.

- RidgeGate Parkway is anticipated to use the existing available pavement width to restripe the
  roadway to provide three through lanes in each direction within the study area during this
  horizon. It is recommended that the existing striped-out inside lane along RidgeGate Parkway
  in both directions be striped as the third through lane.
- Along RidgeGate Parkway WB, westbound left turn lanes should be provided at the West Road (#2) and East Road (#3) intersections. At the West Road (#2) intersection, a westbound left turn lane 190 feet in length with a 120-foot taper should be provided. The East Road (#3) intersection should also provide a westbound left turn lane 190 feet in length with a 120-foot taper. The northbound approach to each of these intersections are anticipated to be for northbound left turning movements and should be stop-controlled with R1-1 "STOP" signs placed at each northbound approach to these intersections. R3-1 No Right Turn signs should be placed underneath the "STOP" signs while R6-1 "ONE WAY" signs should be placed along RidgeGate Parkway WB as appropriate to prevent vehicles from turning right and entering oncoming traffic.
- Along RidgeGate Parkway EB, eastbound left turn lanes should be provided at the West Road (#5) and East Road (#6) intersections. Due to intersection spacing, the East Road (#5) intersection should provide an eastbound left turn lane 175 feet in length with a 75-foot taper. At the East Road (#6) intersection, an eastbound left turn lane with 190 feet in length and a 75-foot taper should be provided. The southbound approach to each of these intersections are anticipated to be for southbound left turning movements and should be stop-controlled with R1-1 "STOP" signs placed at each southbound approach to these intersections. R3-1 No Right Turn signs should be placed underneath the "STOP" signs while R6-1 "ONE WAY" signs should be placed along RidgeGate Parkway EB as appropriate to prevent vehicles from turning right and entering oncoming traffic.
- The East Road and West Road are both anticipated to operate well with one through lane in each direction with turning movements occurring from within the proposed through lanes.

• Two full movement accesses are proposed to be constructed with this project, with the West Access (#7) located along the West Road and the East Access (#8) located along the East Road. Each approach exiting the development should operate well with a shared left/right turn lane and should be stop-controlled with an R1-1 "STOP" sign.

## **2045 Recommendations**

- The north and south legs of Rhapsody Road on either side of RidgeGate Parkway are anticipated to be constructed before the 2045 long-term horizon. When these legs are constructed, the two Rhapsody Road intersections (#1 and #4) will become four-leg signalized intersections. When this construction occurs, a westbound right turn lane 190 feet in length with a 120-foot taper should be provided at the RidgeGate Parkway WB & Rhapsody Road (#1) intersection while an eastbound right turn lane 190 feet in length with a 120-foot taper should be provided at the RidgeGate Parkway EB & Rhapsody Road (#4) intersection.
- The north and south legs of East Road on either side of RidgeGate Parkway are anticipated to be constructed before the 2045 long-term horizon. When these legs are constructed, the two East Road intersections (#3 and #6) will become four-leg signalized intersections. When this construction occurs, a westbound right turn lane 190 feet in length with a 120-foot taper should be provided at the RidgeGate Parkway WB & East Road (#3) intersection while the RidgeGate Parkway EB & East Road (#6) intersection is anticipated to operate well with eastbound right turning movements occurring from within the third eastbound through lane. The northbound and southbound approaches to each of these intersections along East Road are anticipated to operate well through the 2045 horizon with a shared lane for left/through or through/right turn lanes where appropriate.
- When the parcel to the west of the project site is developed, access along West Road should align with the West Access (#7) proposed in this project if an access to that development is anticipated along West Road. In like manner, when the parcel to the east of the project site is developed, access along East Road should align with the East Access (#8) constructed in this project if an access to that development is anticipated along East Road.

## **General Recommendations**

 Any onsite or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Lone Tree and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

## II. GENERAL THROUGH LANEAGE REQUIREMENTS

The updated travel demand model was used to evaluate build-out through laneage requirements on roadways internal to the RidgeGate East project. The travel demand model is a tool designed to produce daily volume forecasts on roadways and to incorporate a transit component that allows the transit network to be refined to capture the impacts of the planned Lone Tree City Center and RidgeGate Parkway light rail stations.

**Figure 2** depicts the build-out through laneage requirements on roadways within the project area. The following summarizes the major findings of this analysis:

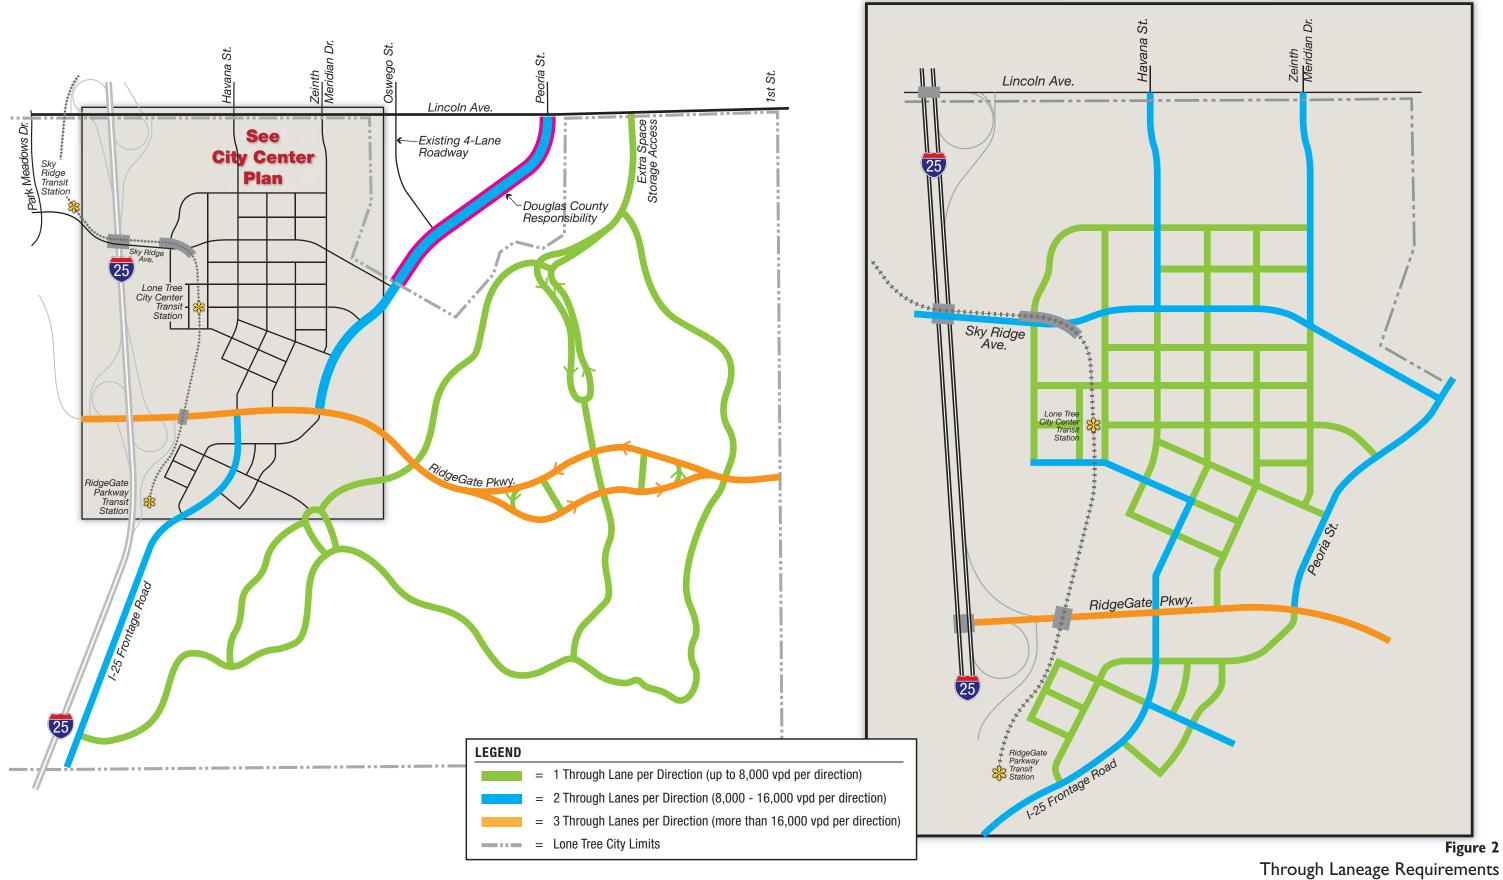

- RidgeGate Parkway within the project boundaries will need to have six through lanes given its east-west connectivity and regional access to the Town of Parker.
- Four-lane roadway segments are primarily located along those streets that are considered
  critical access routes into the City Center and that provide access to the roadway network
  outside the RidgeGate East boundary. Portions of Sky Ridge Avenue, Peoria Street, Zenith
  Meridian Drive, and Havana Street will each require four through travel lanes. Also, an
  unnamed east-west roadway in the southern portion of the City Center was identified as a
  four-lane roadway as it is anticipated to serve significant vehicular volumes destined for the
  Corporate Office zoning identified in the southwest corner of the City Center planning area.
- Other streets within RidgeGate East have traffic volume projections that will allow them to have a two-lane roadway cross-section.

**Figure 2** only represents the number of through lanes needed within RidgeGate East; it does not identify intersection geometry and auxiliary lane requirements. **Section III** of this memorandum details the intersection geometry and auxiliary lane needs. Additionally, intersections that are constructed in-between the major intersections that are included in this report may require auxiliary lanes, specifically left turn lanes.

## III. INTERSECTION TRAFFIC CONTROL AND GEOMETRY

An evaluation was conducted to understand the likely traffic control needs for RidgeGate East and to understand the laneage requirements on intersection approaches. **Figure 3** identifies the intersections that were included in this analysis. This evaluation does not make any judgment or recommendation about other intersections throughout the development or provide any details about requirements outside the project boundaries due to the high-level planning nature of this study. As future development occurs within the site, ongoing analysis and refinement of the network traffic control and laneage requirements will need to occur to determine the appropriate intersection characteristics.

#### Intersection Summary

Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## **APPENDIX G**

Conceptual Site Plan and Turn Lane Exhibit

# RidgeGate Couplet

LONE TREE, CO

## SITE PLAN NOTES

1. THE PROPERTY DESCRIBED HEREIN IS SUBJECT TO ALL APPLICABLE REQUIREMENTS OF THE LONE TREE ZONING CODE AND DESIGN STANDARDS, INCLUDING BUT NOT LIMITED TO, PROPERTY MAINTENANCE, LIGHTING, PARKING, SIGNAGE, LANDSCAPING AND OUTDOOR STORAGE, EXCEPT AS MAY OTHERWISE BE ADDRESSED IN AN APPROVED PLANNED DEVELOPMENT PLAN, SUB-AREA PLAN, OR OTHER APPLICABLE PLAN OR AGREEMENT APPROVED BY THE CITY.

2. THE APPLICANT ASSUMES RESPONSIBILITY TO ENSURE THE PROJECT IS COMPLETED IN ACCORDANCE WITH THE APPROVED SIP AND ANY ASSOCIATED MATERIALS SAMPLE BOARDS AND FURTHER ASSUMES THE RISK ASSOCIATED WITH ANY CHANGES OR OMISSIONS MADE WITHOUT PRIOR CITY APPROVAL. MODIFICATIONS TO STRUCTURES OR SITES MAY REQUIRE AN AMENDMENT TO THE SIP AS DETERMINED BY THE CITY'S COMMUNITY DEVELOPMENT DIRECTOR, PER SEC. 16-27-180. UNAUTHORIZED CHANGES OR OMISSIONS MADE WITHOUT PRIOR CITY APPROVAL CORRECTIVE ACTIONS, DELAY OF PERMITS OR CITATIONS FOR ZONING VIOLATIONS WITH ASSOCIATED FINES AND LEGAL MEASURES. BUILDING PLANS SHALL CONFORM TO THE APPROVED SIP.

3. WITHIN SITE TRIANGLES, AS SHOWN, LIMITED LANDSCAPING SHALL BE ALLOWED WITH NO SOLID STRUCTURES PERMITTED AS STATED IN THE CITY OF LONE TREE'S LANDSCAPE DESIGN GUIDELINES AND STANDARDS FOR LANDSCAPING. LANDSCAPING WITHIN THE SIGHT TRIANGLE SHALL BE MAINTAINED BY THE PROPERTY OWNER OR APPROPRIATE ASSOCIATION OR DISTRICT, AS MAY BE IDENTIFIED IN MAINTENANCE AGREEMENTS RECORDED WITH THE DOUGLAS COUNTY CLERK AND RECORDER'S OFFICE.

4. THE OWNER IS RESPONSIBLE FOR THE INSTALLATION OF ALL ROADWAY SIGNAGE, INCLUDING "NO PARKING/FIRE LANE" SIGNAGE, AS REQUIRED BY THE CITY PUBLIC WORKS DEPARTMENT AND/OR THE FIRE DISTRICT. SUCH SIGNAGE SHALL BE MAINTAINED BY THE PROPERTY OWNER OR APPROPRIATE ASSOCIATION OR DISTRICT, AS MAY BE IDENTIFIED IN MAINTENANCE AGREEMENTS RECORDED WITH THE DOUGLAS COUNTY CLERK AND RECORDER'S OFFICE.

SITE LANDSCAPING, SITE AMENITIES AND FURNISHINGS, AND ALL SITE IMPROVEMENTS INCLUDING, BUT NOT LIMITED TO, SIDEWALKS AND PARKING AREAS SHALL BE MAINTAINED IN A STATE OF GOOD REPAIR CONSISTENT WITH THE APPROVED SIP AND THE LONE TREE MUNICIPAL CODE AND DESIGN GUIDELINES AND STANDARDS. SUCH MAINTENANCE SHALL INCLUDE THE REGULAR MAINTENANCE OF PET WASTE STATIONS (WHEN PRESENT), TO INCLUDE WASTE COLLECTION AND WASTE BAG REPLACEMENT. LANDSCAPE PLANTINGS MUST BE ALIVE AND ALL IRRIGATION MUST BE FUNCTIONAL. ALL MAINTENANCE OBLIGATIONS SHALL BE COMPLETED BY THE PROPERTY OWNER OR APPROPRIATE ASSOCIATION OR DISTRICT, AS MAY BE IDENTIFIED IN MAINTENANCE AGREEMENTS RECORDED WITH THE DOUGLAS COUNTY CLERK AND RECORDER'S OFFICE.

6. THE CITY OF LONE TREE REQUIRES THAT MAINTENANCE ACCESS BE PROVIDED TO ALL STORM DRAINAGE FACILITIES TO ASSURE CONTINUOUS OPERATIONAL CAPABILITY OF THE SYSTEM. THE PROPERTY OWNER SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL DRAINAGE FACILITIES, INCLUDING INLETS, PIPES, CULVERTS, CHANNELS, DITCHES, HYDRAULIC STRUCTURES AND DETENTION BASINS LOCATED ON THEIR LAND UNLESS MODIFIED BY THE SITE IMPROVEMENT PLAN IMPROVEMENTS AGREEMENT. SHOULD THE OWNER FAIL TO ADEQUATELY MAINTAIN SAID FACILITIES, THE CITY OF LONE TREE SHALL HAVE THE RIGHT TO ENTER SAID LAND FOR THE PURPOSES OF OPERATIONS AND MAINTENANCE. ALL SUCH MAINTENANCE COSTS WILL BE ASSESSED TO THE PROPERTY OWNER OR THE RESPONSIBLE MAINTENANCE AUTHORITY.

## LAND USE CHART

GROSS DENSITY						
GROSS AREA	280,9	280,927 SF (6.449 AC)				
TOTAL DWELLING UNITS	349					
GROSS DENSITY	54.12	54.12 DU/AC				
DWELLING UNIT BREAKDOWN						
UNIT TYPE:	DWELLING UN	IITS TOTAL BEDROOMS	% (DU)			
ONE BEDROOM	223	223	63.90			
TWO BEDROOM	103	206	29.51			
THREE BEDROOM	23	69	6.59			
TOTAL	349	498	100.00			

PROJECT PARKING							
	PROVIDED	*REQUIRED					
OFF-STREET PARKING GARAGE	569						
OFF-STREET STANDARD	4						
ON-STREET DIAGONAL	14	644					
ON-STREET PARALLEL	23	611					
STANDARD DELIVERY AND LOADING	3						
RESIDENTIAL LOADING	2						
TOTAL	615	611					

\* REQUIRED SPACES ARE CALCULATED AS FOLLOWED: 1.5 SPACES PER DWELLING = 524 SPACES .25 SPACE PER DWELLING FOR GUESTS = 87 SPACES

PROJECT BIKE PARKING				
	PROVIDED	*REQUIRED		
SURFACE MOUNTED BIKE PARKING	18	12		
TOTAL	18	12		

\* REQUIRED SPACES ARE CALCULATED AS FOLLOWED:

"MINIMUM NUMBER OF RICYCLE PARKING SPACES SHALL BE PROVIDED FOLIAL!"

"MINIMUM NUMBER OF BICYCLE PARKING SPACES SHALL BE PROVIDED EQUAL IN NUMBER TO PERCENT (2%) OF THE TOTAL NUMBER OF AUTOMOBILE PARKING SPACES PROVIDED"

THE TOTAL NUMBER OF AUTOMOBILE PARKING SPACES
-AUTOMOBILE PARKING SPACES PROVIDED = 615

-AUTOMOBILE PARKING SPACES PROVIDED = 615 - .02 X 615 = 12 REQUIRED BIKE PARKING SPACES
